

GREEN ADVANTAGE

POWERSTICK™

Designed by **ECOSOL®**

Cellphone chargers sold globally each year could
wrap around our planet
18 times

Relieve the pressure, reduce the waste.

More than a billion chargers are sold globally each year. In 2004, approximately 18,900 tons of solid waste was consumed to produce the 630 million mobile phone chargers sold.

inefficient chargers are

draining our world

resources

Replenish the planet, reduce the waste.

Did you know chargers use power when they are plugged into the socket, but no device is attached. The same is true when your device is plugged in but is finished charging. With over a billion chargers sold each year that amounts to a lot of wasted energy.

POWERSTICK ADVANTAGE

- One Powerstick™ charges all your devices, reducing the need for more than one charger.
- The device will outlast most devices with a 1000+ cycle lifespan.
- The portability of the unit allows for shorter cables from device to power source.
- Our system controls energy flow to your device, reducing overall energy consumption.
- The Powerstick™ does not consume energy if it remains plugged into a USB once full.
- The automatic sleep mode feature saves energy when the device is not in use.
